

MOTomed for a positive therapy progress

"Stay in motion", as lack of movement accelerates the degeneration process of the human body. For more than 30 years, the MOTomed movement therapy device has been globally proven to positively influence the therapy progress of many diseases. Benefit from the smooth, controlled and pleasant movement. Strengthen your physical and mental well-being with regular MOTomed training.

Movement for a better well-being.

The MOTomed enables regular movement training for persons with physical limitations. Passive, motor-assisted or active resistive training - the MOTomed training loosens and strengthens the muscles, stimulates the metabolism and the circulation, and improves endurance and the function of the cardio vascular functions.

Special components for individual needs

Enjoy your MOTomed training at home, independently and privately, free from weather and seasonal changes. Twelve special MOTomed models with more than ninety accessories and special software features such as SpasmControl, MovementProtector and ServoCycling allow for a safe training according to your individual requirements.

Accepted by the German health insurances.

The MOTomed is an authorized medical aid in Germany. In Germany, upon certain preconditions, up to 100% of the cost is covered by the government health insurance.
